

Patient Name:	Mrs. Dummy	Registered on:	09/08/2022 02:49 PM	 1008
Age / Sex:	34 YRS / F	Collected on:	09/08/2022	
Referred By:	Dr. Self	Received on:	12/08/2022	
Reg. no. / UHID:	1008 /	Reported on:	09/08/2022 02:49 PM	
Investigations:	Viral Marker			

SEROLOGY & IMMUNOLOGY

VIRAL MARKER

TEST	VALUE	UNIT	REFERENCE
HIV (Card Test)			
HIV - 1	NEGATIVE		
HIV - 2	NEGATIVE		

1. A negative result implies that no Anti HIV – 1 & HIV - 2 antibodies have been detected in the sample by this method. This means that either the patient has not been exposed to HIV-1 or HIV-2 infection or the sample has been tested during the “WINDOW PHASE” (before the development of detectable levels of antibodies).

2. A positive result suggests the possibilities of HIV-I and / or HIV-II infection. However these results must be verified by a confirmatory test (IFA / WESTERN BLOT I-II) before pronouncing the patient positive for HIV-1 and / or HIV-2 infection.

VDRL NON-REACTIVE

LIMITATION:

1. The test described here is primarily valid as a screening procedure. It advisable to confirm positive sample with other methods employing specific treponemal antigen e.g tpha, ftaabs etc.
2. This method may give false positive result in presence of disease such as leprosy, malaria, toxoplasma, infectious mononucleosis or lupus erythematosus.

Hepatitis C Virus, HCV NEGATIVE

HBsAg NEGATIVE

A Negative result does not preclude the possibility of infection with HBV. Other clinically available tests are required if questionable result are obtained. As with all diagnostic tests, a definitive clinical diagnosis should not be based on the result of single test, but should only be made by the physician after all clinical and laboratory findings have been evaluated.
