**SEROLOGY & IMMUNOLOGY**

TEST	VALUE	UNIT	REFERENCE
VDRL	NON-REACTIVE		

Result	Remarks
Reactive	Indicates the presence of IgM & IgG antibodies against non-treponemal antigens
Non-Reactive	Indicates absence of IgM & IgG antibodies against non-treponemal antigens

**Note:**

- Titers of  $\geq 1:8$  and rising titres are significant.
- Positive result indicates ongoing or recent infection and the diagnosis should be confirmed by specific Treponemal tests such as TPHA & FTA- AbS.
- The reactivity will vary with the Primary (60-86%), Secondary (99%) and Tertiary (98%) stage of Syphilis.
- False positive results may be observed in patients of Malaria, Hepatitis, Mumps, Leprosy, Infectious Mononucleosis, Rheumatoid Arthritis and Collagen disease.
- False negative reaction may be due to processing of sample collected early in the course of disease, immunosuppression and due to prozone effect.

**Uses :**

- To screen for presence and monitor the progression of Syphilis infection.
- To assess the response to therapy (decreasing titres) in patients being treated for Syphilis.

~~~ End of report ~~~

Mr. Sachin Sharma  
DMLT, Lab Incharge

Dr. A. K. Asthana  
MBBS, MD Pathologist
